There is no reliable detailed information as to population movement, though the general opinion is that the population has remained static for some time; nor are there data on the frequency of intermarriage between Mbuti and villagers. Jadin (1936) and Costermans (1937) confirm Schebesta's (1952, 47) opinion that miscegenation is a one-way movement. A village male may take a Pygmy wife, in which case the children will be brought up in the village, but a Pygmy male will never take a villager wife. This holds equally among archers and net hunters (Putnam, 1948, 325). Information for the Aka is, as usual, conflicting and unreliable. Schweinfurth (1874) asserts that there is intermarriage between the Aka and the Mangbetu; Burrows (1898) claims that there is no such intermarriage.

Information as to the attitude of Mbuti and villagers toward miscegenation is also lacking. Schebesta says that certain northern tribes of villagers aver horror at the idea of intermarriage, but that in spite of this it takes place and is nowhere unknown. Both the Lese and the Bira tribes, with which the archers and net hunters are most in contact, are considerably modified physically owing to the frequency of miscegenation (Schebesta, 1952; Geluwe, 1956),

but Schebesta estimates at only 5 per cent "the proportion of Negro blood passed to the Pygmies" (1938, 111). Costermans (1937), however, who made a detailed study of the Watsa-Gombari population, says that in most villages (in his area anyway) marriages of Lese or Mamvu with Pygmy women are rare.

LANGUAGE

Contemporary linguists are divided as to the question of Pygmy language. Some take the view that a search for such a language is bound to be fruitless; others (Putnam) find traces of it only in personal names and a few place names and names of animals and plants. Schebesta (1952), however, believes that he has found the remnants of the original Pygmy tongue among the Efe archers. Efe and KiBira are the two main camp languages of the Mbuti, the former belonging to the Mamvu-Lese-Mvuba language group, and the latter to the semi-Bantu Bira.

551 Thus in the Epulu region most Mbuti have both Ngwana and Bira names, not necessarily with
[613] the same meaning. The occasional use of a
[602] grandfather's name is another indication of the lack of importance attached to lineal ties in this group, and an indication of the size of the largest group to which they conceive of them-
[614] selves as belonging. Clan names (ancestor names) exist, but these seem to have little
[103] social significance. Place names are used fre-
[101] quently to differentiate one hunting band from another.

621 It is virtually impossible to distinguish any
563 of the alien families that have attached themselves to a net-hunting band, so completely are
[832] they assimilated. Perhaps the easiest indication would be open flirtation between members of the opposite sex within a hunting band. And
621 finally (see below, p. 257, for a fuller treat-
575 ment), there is the *elima*, the women's religious
562 association which unites the women of the band
182 in opposition to the men (regardless of lineage), and at the same time acknowledges the common values of both, so unites them as a single group in relation to the forest. It also unifies the total
[186] band in relationship to the worlds of spirits, animals, villagers, and presumably of other semi-human beings such as Europeans. It never unifies the band in opposition to other hunting bands or lineages.

important, for both net-hunters and archers, that a hunter should know well the habits of those who are near him on the hunt. Insofar as children learn to hunt mostly but by no means entirely from their fathers, it is obvious that brothers are likely to be most familiar with each other's hunting techniques, and will thus make the best hunting partners. But against this work many other practices, such as communal hunting games for all children, regardless of relationship, and the frequency of adoption, and of assimilation of adult strangers into the band.

If we cannot find any explanation for the flux and instability that seem characteristic of the band in terms of kinship or economy, or indeed in terms of any aspect of forest life, both become immediately meaningful in considering the relationship between the band and the village. Without going into this in detail at the moment, it must already be evident that the system, or lack of it, must be unhappily confusing for the patrilineal patrilocal villagers, who claim both lineal and territorial rights over Mbuti bands. For as we have seen, a band does not maintain any kind of unilineal integrity even within a single camp, let alone from one camp to the next. And owing to the wider flux, caused by the constant process of fission and fusion, the band has merely territorial reference and cannot be said to apply to specific individuals or lineages. A lineage such as Cephu's may be in the Epulu territory one month and in Ebiani the next. So with every lineage, as with every individual, there is an infinity of territories to which he may move if it pleases him, and the system, such as it is, encourages such movement to the point that no villager can ever be sure of what Mbuti lineages are hunting in "his" territory. Let us leave it for the moment, then, that at least one possible structural result of the combination of the nonlineal nature of the band and its tendency to flux is the counteraction of the village system, rendering the villagers' lineal and territorial claims impractical of assertion.

THE FAMILY

It would of course, be ridiculous to deny that there is any system of kinship, but it is certain that the kinship system does not have the same importance as a focal point of social control as it may in other African societies. To my mind this is undeniably linked to the ad hoc nature of the society, with its almost complete lack of concern for the past, as for the future. This is something we shall discover in

commercial village that was set up on the roadside, by the government, immediately after Pat's death. The main focus of the village was not, as in so many villages, in either special plantations or road work, but in the Station de Chasse. This, with its collection of live forest animals, became an attraction for wealthy tourists with time and money enough to make the trip from Stanleyville or Beni; hence the optimistic Belgian who built the motel directly opposite. A little farther up the road, away from the river, were the houses of several hundred workers. This village stretched right up to the entrance of Camp Putnam, and beyond was the Hotel de Bière and a line of a half-dozen or so stores. The majority of these villagers, as in Camp Putnam, were from distant districts and from many different tribes. But here they had nobody to hold them together, as Putnam had his workers; their disputes were settled arbitrarily, according to Belgian notions of right and wrong. It was a village filled with jealousies, deep-seated grievances and smoldering hatred.

A few kilometers to each side of the Epulu River were two traditional villages. To the west was Dar es Salaam. The name was brought from the coast by the slave-traders, and its inhabitants were all descendants of the almost universally disliked BaNgwana, who had sold their souls to the traders and helped them in the capture of slaves and the theft of ivory. The headman of Dar es Salaam was a friendly rogue, Musafili. About two kilometers away from Dar es Salaam was the camp of Musafili's Pygmies. Like every other Negro he referred to "his" Pygmies as though they were chattels. Although Dar es Salaam always offered the warmest hospitality, I never felt at ease there. The heritage of a bloody and treacherous past was only barely dormant, and the BaNgwana are suspected today, as they always have been, of practicing the most dreaded forms of witchcraft and sorcery.

A little farther to the other side of the Epulu was a very different village, and one much more typical of the traditional settlement in

Mbuti

either a pith helmet decorated with gennet skin, or else a long-haired wig of monkey fur. In his hand he carried a metal walking stick that had once been the handle and stem of an umbrella. Sometimes he wore the gennet skin around his waist, or tucked into his belt, or hung from his neck. It was the symbol of his ritual authority, and it contained the charms from which he derived his power. Generally Sabani was a kindly and gentle man, wise and good. But his loyalties were narrow, confined to his own kin and a few friends. Beyond that circle he was a man to be feared rather than trusted.

Eboyo also had its Pygmy village, not far from the main village, but Sabani preferred to keep his Pygmies in the forest where the administration could not see what they were doing. Generally they were tending illicit plantations, of hemp among other things. Sabani also had his own still, where he used to have a powerful spirit made from manioc. He was frequently drunk but never incapable. At all times he was an imposing and commanding figure. In his village there were some thirty families, including Kapamba's. Camp Putnam and Dar es Salaam were about half that size.

The attitude of all these villagers to the forest was the same. They made their villages as open as possible, and they built their houses without any windows. They tried to ignore the world around them, because for them the forest was hostile, something to be feared and fought. Even after cutting it down there was the constant labor required to keep it from growing back. It was filled with evil spirits that cursed the soil so that although it would bear gigantic mahogany trees it would produce only the most meager fruits for the villagers.

The tribes of this area had once been plains dwellers, with herds of cattle, living in the friendly open spaces of East Africa. When they were driven into the forest by more powerful tribes, they brought as much of their plains culture with them as they could. But their cattle died off, and they had to live by cultivation alone. They
